1.2 Net split

Net Split is a method, which gives Netsukuku the ability to use all the IP addresses available for a specific Internet Protocol while being compatible with it.

5. the usage of Carciofo [8] over the Internet.

6. the workaround of NAT restrictions: even with only one Internet connection it is possible to connect an entire LAN to Viphilama. Inside Viphilama, every node of the LAN will get an unique IP, therefore the NAT restriction imposed by the ISP (if you want more IPs you have to pay) is

^_^
